

BARTLETT® 95

95 mm Trailer Ball Coupling Medium Application Trailers

Ratings

Rigid Drawbar (Pig) Trailer

Max. ATM 7 000 kg
Static Vertical Load by Formula -
See information sheet "95 Ratings Explained"

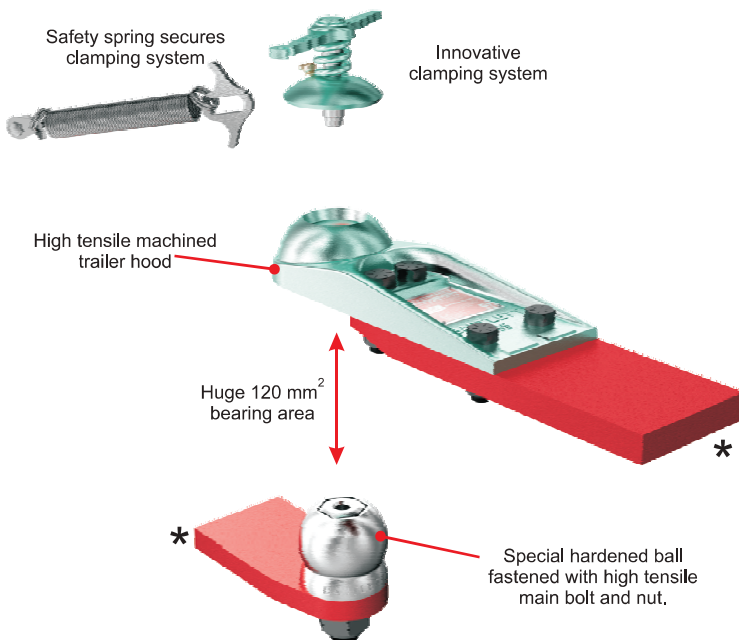

Hinged Drawbar Dog Trailer

D-Value 70 kN

Use the Bartlett 95 to tow valuable trailer loads such as wood chippers, earthmoving machinery, coach camping trailers, general cargo and many others.

Features include:

- **Low profile ball and socket design** to maximise strength and minimise stress.
- **22.5° Oscillation** - Fore, aft and twist ~ Most coupling designs are restricted to less.

* Mounting lugs not included
Shown for illustration only.
Optional Extras - See Bartlett

How it works

1. Lower trailer hood onto ball
2. Clamp trailer to ball using clamping assembly
3. Secure clamping system with safety spring
4. Connect supply lines - start towing

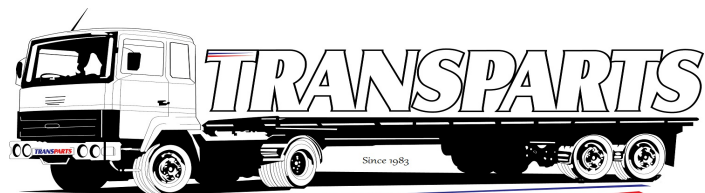

- **Massive spherical bearing area** for extended coupling life ~ minimal maintenance means value for money.
- **Micro working clearances** - eliminate the fatigue and backlash inherent in all ring couplings. Zero backlash means protection for cargo, geartrain, driveline, driver and passengers. Truck and trailer are united as one vehicle.
- **ADR 62 testing and compliance** - for legal security.

• Look no further than the genuine Bartlett 95.

Bartlett also manufactures a range of towbar kits and safety chain systems for complete towing surety.
